Environment-friendly carbon leather adopts micro bamboo carbon powder as basis material, nano-titanium dioxide and nano-silicon dioxide as a supplement. It is produced by the high-tech patented formula and manufacturing process. It has got two national invention patents and passed european standard inspection from the SGS international authoritative testing organization. Carbon leather neither contains harmful materials such as hexavalent chromium, pentachlorophenol, benzene, toluene, nor will it release noxious gases, compounds, etc. Carbon leather maintains the same appearance and quality as genuine leather, but it has the features of adsorption, decomposition and fire-retardant which are not available in genuine leather. Therefore it solves the air pollution problem and provides you with a neat, smellless and germ-free environment.
